FACTSHEET **JOIN DSH**

Data Safe House
Enabling New Energy Infrastructures

Joining Data Safe House in 6 steps

Would you like to participate in Data Safe House? Below, you will find a step-by-step overview of what to expect as an industrial party.

1. Get in touch

You can reach us via the contact form on the Data Safe House (DSH) website. After receiving your details and an introductory meeting, we assess whether Data Safe House is a good fit for your organisation.

2. Introduction meeting

The Data Safe House manager of your industrial cluster will first contact you for an introductory meeting. During this conversation, you will discuss:

- your organisation and sustainability and investment ambitions
- which data you would like to share and with whom
- how participation in Data Safe House can create value for your organisation

3. Create an account on the IT platform

After a positive introduction, your Data Safe House manager will send you a link to create an account on the Data Safe House IT platform.

As part of the registration process, you agree to the Terms of Use of Data Safe House and the regulations of your industrial cluster. These agreements define how Data Safe House operates and safeguards the security of your data.

4. Collect your data internally

Within your own organisation, you collect the required data according to the agreed data format. This ensures that data can be shared in a nationally uniform way.

5. Submit and validate your data

You now enter the data you want to share on the platform. Please note: the visibility of data fields and the level of access can be adjusted later per data requester. You can find instructions for entering your data here. Your Data Safe House manager can also provide further support with any content-related or technical questions about the platform.

After submission, the Data Safe House manager validates the data. This is a check on the completeness and quality of the information provided. For larger organisations, an additional meeting may take place to provide context to the data users. In some cases, this discussion helps provide the right context for parties using the data.

6. Active participation within your cluster

Once your data has been validated and made available on the platform, you become an active participant within the cluster. Through Data Safe House, you can:

- decide whether and at what level you want to share your data with other parties
- gain insights into how your data has been used
- contribute to the further development of Data Safe House through use cases and pilots
- collaborate with other participants on the future energy infrastructure of your cluster, in a secure and trusted environment

Need support?

Feel free to contact the Data Safe House manager of your industrial cluster.
